Introduction

The Texas School Survey is a collection of self-reported tobacco, alcohol, inhalant and substance use data gathered annually from students in public schools throughout the state of Texas. The survey, conducted by the Public Policy Research Institute (PPRI) in conjunction with the Texas Health and Human Services Commission (HHSC), is also administered in even numbered years to a representative state sample of Texas students in grades 7 through 12.

Data from the state sample is incorporated by HHSC into a larger database that includes historical data from previous Texas School Surveys. This data is then used to track trends in substance use, so that policymakers at the state level have up-to-date information on which to base decisions and establish prevention strategies. This state level data is also used by those at the campus/district/region level as a standard which they can compare their own data against - interpreting their local findings in the larger context of the state as a whole and planning appropriate action.

This report provides data on students in HHSC region 2. It is divided into three major sections. The first section, titled "General Substance Use Tables", focuses on information specific to each type of substance asked about in the survey - tobacco, alcohol, drugs, and inhalants. Each of these subsections examines the prevalence of use for the given substance type, as well as detailing environmental factors that are generally recognized as contributing to a students' likelihood to use. The second section, titled "Prevalence Tables", provides prevalence and recency of use data for numerous substances covered by the survey. In addition to providing usage information on the overall student body, this section also breaks-out the same data for specific groups within the population. The last major section titled, "Margin Tables", details the number and percentage of students providing each response across all questions in the survey. Finally, the report concludes with an appendix detailing the revised reporting methods for prevalence and recency of use values discussed below.

Prior to 2016, the reported values found in prevalence and recency of use tables (tables T-1, A-1, D-1, D-11, D-12, I-1, and B-1 through B-12 on the current survey) were based solely on students' answers to the questions that directly asked how recently, if ever, they had used each substance (Q14-18 on the current survey). Beginning this year, the students' answers to other questions on the survey are also taken into account, such that if they indicated more recent usage for a substance on any other question, their reported prevalence and recency of use values for that substance are updated to reflect the most recent usage. For example, if a student responded on Q16a that the most recently they had used marijuana was "Since School Began in the Fall", but also reported on Q19d that they had used marijuana "1-2 Times" in the past 30 days, in prevalence and recency tables they would be classified as having used marijuana in the past month. Only tables found in the first two sections of this report will be affected, as the margin tables, found at the end of the report, retain the original responses for all questions on the survey - including those for Q14-18. Along with the introduction of electronic vapor products as a form of tobacco in this years' survey, these changes to reporting procedures may lead to increases in the reported prevalence and recency of use for numerous substances over what they had been in previous years. These changes provide a more accurate representation of substance use among students covered by this report; however, they also limit the direct comparability of prevalence and recency values found in this report to those from reports in prior years - please use caution when making such comparisons.

Appendix:
Reporting Methods for Prevalence & Recency of Use

Introduction to Appendix

As noted in the introduction to this document, the methods for reporting prevalence and recency of use values have been revised this year to provide a more accurate representation of substance use among students. In previous years, the reported values were based solely on students' answers to the questions that directly asked them how recently, if ever, they had used each given substance (Q14-18 on the current survey). Beginning in 2016, the responses to those questions are used as the basis for the values reported in the prevalence and recency of use tables (tables T-1, A-1, D-1, D-11, D-12, I-1, and B-1 through B-12), which are updated if the student indicated more recent usage for the relevant substance on another question in the survey. This appendix provides a reference as to what those questions are, and how they are so utilized to update the values reported in the prevalence and receny of use tables.

Tobacco

There are no additional questions on the survey that can be utilized to update prevalence and recency of use for any of the individual tobacco products. The values for those substances in prevalence and recency of use tables will be identical to those in the corresponding marginal tables. However, the overall "Any Tobacco Product" category is updated as described below.

Any Tobacco Product	
This category represents the following group of individual tobacco products; cigarettes, smokeless tobacco, & electronic vapor products. The initial values for this category will be the most recent reported usage from among those substances. The questions below are used to update these initial values.	
Question	**Updating Rule**
Tobacco Use in Past Month (Q19a : tobac_30)	If an initial value is "Never Used", "Ever Used", "School Year" or missing, update it to "Past Month" for any response to this question other than "Never Heard/Used".
How Often Normally Use Tobacco (Q22a : tobac_u)	If an initial value is "Never Used" or missing, update it to "Ever Used" for the following responses to this question; "Less than Once/Year", "About Once/Year".
